

Bespoke Die-Cast Housing

Custom die-cast housing developed from your design through production tooling.

Overview

A custom die-cast housing developed from your 3D design through to production tooling, with our tool room supporting design-for-castability review before a single tool is cut.

Soft-launch validation batches are standard practice on every new custom casting program before we commit to full-rate production.

Technical Specifications

Material	Aluminium or Zinc alloy, per application
Tooling	In-house design & build
Validation	Soft-launch batch before full rate
Volume Range	5,000 – 100,000+ units/year

Typical Applications

- Custom equipment housings
- New product introductions
